Sebastian Scheibler

Game Developer · Systems & Narrative Design

Aschaffenburg, Germany | sebastian.scheibler.dev@gmail.com
Portfolio: rhynhere.github.io | GitHub: github.com/RHYNhere | LinkedIn: linkedin.com/in/sebastian-scheibler-524455251

PROFILE

Game developer with a B.Sc. in Games Engineering and 3+ years of building production software at startups. Strongest at systems and narrative design, backed by hands-on engineering in Godot, Unity and C++. Co-founder of an indie studio, currently developing the first-person narrative game Appointed.

GAME DEVELOPMENT

Co-founder & Game Developer (part-time) | Manifest Games GbR | Aschaffenburg Sep 2025 – present

Appointed (in development): a first-person narrative game and propaganda sim set in a fictional technocracy, with light shooter mechanics. Godot 4, PC. Solo development within a four-person studio.

- Designed the core loop around mundane state jobs, where the same work tool doubles as the weapon
- Structured the story in four Kishōtenketsu acts; a questionnaire after each level records the player's answers and decides the ending
- Built a playable first-level blockout in Godot: player controller, mining drill, destructible walls, enemies, terminals and objective doors (26 scripts, ~2,300 lines of GDScript)
- Own the art direction (palette, typography, constructivist poster references) and create the marketing assets, such as the animated flag loop on the studio website

SELECTED PROJECTS

Crimsonsoil Vernissage | Interactive horror quest, solo | Twine, SugarCube | Play 2025

- Adapted a horror quest from my own tabletop campaign into interactive fiction with four endings
- Built the structure around the way back: every detail the player examines on the way in becomes a threat on the way out, tracked through story variables

Sweet Syndicate | Game concept, solo | Portfolio 2025

Narrative isometric RPG about a sugar refinery, written as a 15-page high concept for a funding application.

- Designed a works council as the central mechanic that ties workplace simulation, social relationships and parliamentary votes into one loop
- Documented daily and weekly loops with diagrams, plus cast, target audience, age rating (USK 12) and a competitive analysis against Disco Elysium, Papers, Please, Suzerain, Frostpunk and Citizen Sleeper

Generation and adaption of quest-based environments | B.Sc. thesis | Unity, C#, Python | GitHub 2024

- Generated game environments from quest descriptions: an LLM returns a structured JSON description of regions, points of interest and NPCs
- Built the generator that turns it into terrain through Voronoi region partitioning, heightmap generation and rule-based object placement (~2,300 lines of C#)

Technocracy & Spectrum | 2D engine and game, solo university project | C++ | GitHub 2024

- Built a 2D engine with sprite rendering, animation, audio, input and an event system on OpenGL (GLFW, Glad), Box2D, SoLoud and ImGui; core architecture follows TheCherno's Hazel series
- Developed the game Spectrum on top of the engine (~6,400 lines in total)

detec2d | Unity tool, team of 2 | C# | GitHub 2023

- Co-developed a vision- and sound-based detection system for stealth AI agents
- Decoupled agents through interfaces and an event manager; custom inspectors let designers tune vision cones and sound radii without code

PROFESSIONAL EXPERIENCE

Data Engineer | EV Levels GmbH | Munich — Apr 2026 – Aug 2026

- Built two analysis dashboards and several Python data pipelines that automated recurring data processing, in a team of six
- Built adapters between the internal database and an external submission process, generating the result files that were sent out

Tech: Python, Pandas, PostgreSQL, TypeScript, Docker Compose

Full-Stack Developer | vAudience GmbH | Würzburg — Sep 2024 – Mar 2026

- Delivered AI automation for 3–5 client projects in a core team of four, from analysing existing workflows to concept, presentation and implementation
- Built an AI-assisted translation workflow for Adobe InDesign documents
- Wrote prompts and built tools for client-facing AI agents; benchmarked RAG pipelines to compare retrieval setups
- Developed internal web applications and the API layer connecting several LLM providers

Tech: Python, FastAPI, JavaScript, Alpine.js, SQL, vector databases, Git

Software Developer (working student) | MicroNova AG | Vierkirchen — Jan 2023 – Jul 2024

- Maintained and extended an internal web application for data editing and visualisation in an agile team of about five

Tech: Python, Flask, JavaScript, MongoDB, Git

SKILLS

Design	Systems design, narrative design, level design, concept documents
Engines	Godot, Unity
Languages	C#, C++, GDScript, Python, JavaScript/TypeScript, SQL
Graphics & libraries	OpenGL, Box2D, ImGui
Tools	Git, VS Code, Twine, Photoshop, GIMP, Inkscape, Blender (basics), Jira, Confluence
Platforms	PC

EDUCATION

B.Sc. Games Engineering | Julius-Maximilians-Universität Würzburg — Oct 2018 – Sep 2024
Thesis: Generation and adaption of quest-based environments
Relevant coursework: Game Lab 1–3, Computer Graphics, Asset Development

Abitur | August-Bebel-Schule | Offenbach am Main — 2016
Advanced course in Media Design, with media design certificate

LANGUAGES

German (native) · English (fluent, daily professional use; Cambridge B2 certificate) · French (basic; DELF B1)

INTERESTS

Game Master for Pathfinder 2e for several years: writing my own campaigns, story arcs and encounters, and adjusting them to the table as we play.
